1. Machine learning is an "iterative" process, meaning that an AI team often has to try many ideas before coming up with something that's good enough, rather than have the first thing they try work.

True

False

正确

分数

2. Say you want to use Machine Learning to help your sales team with automatic lead sorting. I.e., Input A (a sales prospect) and output B (whether your sales team should prioritize them). The 3 steps of the workflow, in scrambled order, are:

(i) Deploy a trained model and get data back from users

(ii) Collect data with both A and B

(iii) Train a machine learning system to input A and output B

What is the correct ordering of these steps?

(i) (iii) (ii)

(i) (ii) (iii)

(ii) (iii) (i)

(ii) (i) (iii)

3. What are the key steps of a Data Science project?

Collect data

Analyze the data

Suggest hypothesis or actions

All of the above

正确

分数

4. Machine Learning programs can help: (select all that apply)

Automate lead sorting in sales

正确

Customize product recommendations

正确

Automate visual inspection in a manufacturing line

正确

Automate resume screening

6. Say you want to build an AI system to help recruiters with automated resume screening. Which of these steps might be involved in "technical diligence" for the? (Select all that apply.)

Defining an engineering timeline

正确

Making sure you can get enough data for this project

正确

Ensuring that this is valuable for your business (e.g., estimating the project ROI)

未选择的是正确的

Making sure that an AI system can meet the desired performance

7. Which of these statements about "business diligence" do you agree with?

Business diligence is the process of ensuring that the envisioned AI technology is feasible.

Business diligence applies only if you are launching new product lines or businesses.

Business diligence can typically be completed in less than a day.

Business diligence is the process of ensuring that the AI technology, if it is built, is valuable for your business.

8. You want to use supervised learning for automated resume screening, as in the example above. Which of the following statements about the Training Set are true? (Select all that apply.)

The Training set and Test set can be the same dataset.

未选择的是正确的

It should give examples of both the input A (resume) and the desired output B (whether to move forward with a candidate).

正确

It should give examples of the input A (resume) but not necessarily the desired output B (whether to move forward with a candidate).

未选择的是正确的

It will be used by the AI team to train the supervised learning algorithm.

9. For your automated resume screening application, you are now providing a Test Set to the AI team. Which of the following statements about the Test Set are true? (Select all that apply.)

It should give examples of both the input A (resume) and the desired output B (whether to move forward with a candidate)

正确

The Test Set should ideally be identical to the Training Set.

未选择的是正确的

It will be used by the AI team to evaluate the performance of the algorithm.

正确

It should give examples of the input A (resume) but not necessarily the desired output B (whether to move forward with a candidate).

未选择的是正确的

10. Which of these are reasons that it's often unrealistic to expect an ML system to be 100% accurate?

You might not have enough data

Data can be mislabeled

Data can be ambiguous

All of the above.

正确
